

**AS. Interface conversion kit intended for the Altop valve controller system of Alfa Laval VU2.VU3 and VU4**

In substitution for the strongly obsolete bus system Alert courses of Alfa Laval, Sitomatic offers a complete conversion kit on the market, based on the well-known AS Interface bus system. The total system exists from gateways, power supplies and the specific wiring components for the process industry.

The conversion set for the Alfa Laval Controller exists from PCB with integrated hall position initiator with a choice possibility for connection for external initiator, and the existing solenoid valve. Thereafter a display module which will be mounted in the window of the address switches. An assembly instruction will be included with this kit. The total conversion time inclusive the disassembly of the existing components, the assembly and addressing the new implementation is  $\pm 15$  a 20 minutes.

The by Sitomatic developed installation packet is a qualitative well-considered wiring system for the process industry. With cable junction box with or without short circuit protection with intergraded power supply, plugs, gateway for all common bus systems of a higher order, such as Profibus, Profinet, Devicenet and Ethernet. In short a complete AS-Interface bus system for the liquid process industry.
