

AS-Interface conversion kit for the Alfa Laval Satt Top valve controller system.

For the replacement of the Satt Top system that is at the end of its life cycle, Sitomatic offers a complete conversion kit to the market. It is based on the well-known AS Interface bus system. The total system consists of gateways, power supplies and the specific well known Simaline wiring components for the process industry.

The conversion set for the Alfa Laval Controller contains a electronic module with connection cable for the connection to the existing internal Satt Top PCB. The total conversion time includes the disassembly of the existing components and the assembly and addressing of the new components. This total implementation takes only 5 to 10 minutes for each controller.

The installation package that is developed by Sitomatic is a complete well thought out wiring system for the process industry. It includes a cable junction boxes with short circuit protection, intergraded power supply and gateways for all common bus systems such as Profibus, Profinet, Devicenet and Ethernet. In short a complete AS-Interface bus system especially designed for the liquid process industry.
